### What's New in the Mendak?

MENDAC (Mendacity for Developers) is a graphical user interface for GNU/Linux and Windows that aims to be an efficient tool for both developers and users. The current releases are based on the KDE 3.5.2 library but are completely independent from it. The goal is for MENDAC to be a complete and integrated GUI that helps developers and users, while being simple and easy to use. What is Mendak? Mendak is a multi-tabbed, graphical web browser. It has its own integrated media player, media management toolkit, tab manager, and FTP client. You can even share files with other Mendak users via an integrated file manager. The support of other types of multimedia, including audio and video, are also included. Mendak Features: Tabbed browsing: use tabs to navigate web pages and form links using an editor Customizable appearance using themes URL editing: edit both the URL and the text formatted into a page using the character editor and clipboard Automatically downloads files: There's an option to store a text file after it has been downloaded, and you can also send an URL to a file. File can be saved to directory you specify, and it will be uploaded later. Media management: Mendak provides automatically downloading, editing, saving and viewing of media files. These include images, sound files, videos, etc. Image viewer: Mendak provides a tool to view images using either the original file or an altered form. Media control: you can control the media from within the browser itself instead of from the OS or the application. File downloading and uploading: you can define a directory where remote files are to be stored, including on other machines, and upload them later. The remote location can be a URL, a file on the same machine, or a directory on a different machine. Homepage: you can set a default starting page to open when you start Mendak. FTP client: You can edit remote files directly from the HTML editor. A: I like using Firefox as it's a great deal of functionality and is easy to find all kinds of answers to most questions. The forums and wiki for it are very extensive and
