AN4U Vivian Cheung, Fitzgerald TDK .Q: How to perform  
calculations based on if in mysql I am learning PHP, right  
now I am trying to perform some calculations based on a  
yes/no answer in the database, but I am having trouble  
figuring out how to get it to work. In the code below I tried  
to convert the yes/no answers to numbers, but I don't know  
what I am doing wrong to be able to get it working. '1','no'  
=> '0'); \$answers = mysql\_query("SELECT \* FROM  
Questions WHERE UserID = ".\$sessionuser->ID.""); \$answer  
= mysql\_result(\$answers, 0); echo \$answer; ?> A: You have  
to fetch the result from the database. Check mysql\_result()  
documentation for more details. \$data = array('yes'  
=>'1','no' => '0'); \$answers = mysql\_query("SELECT \*  
FROM Questions WHERE UserID = ".\$sessionuser->ID."");  
\$answer = mysql\_fetch\_assoc(\$answers); // yes/no is stored  
as 1/0 echo \$answer['yes']; echo \$answer['no'];  
Explanation: Retrieving the data and saving it to a local  
variable \$answer will help you retrieve the value, for  
example echo \$answer['yes'] will echo the value 1, and  
echo \$answer['no'] will output 0. Pulmonary alveolar  
proteinosis after bee sting. Pulmonary alveolar proteinosis

---

is a rare cause of pneumonia. A 47-year-old man had complications of anaphylactic shock after a bee sting. After drug treatment, he developed respiratory failure and was treated with mechanical ventilation. After he was weaned from mechanical ventilation, he was asymptomatic, and computed tomography and transbronchial lung biopsies demonstrated pulmonary alveolar proteinosis. Clinical
